

# Secure Your Software

## The Challenge is Daunting

Organizations often struggle to embed security into fast-paced development processes. Traditional methods create bottlenecks, delay delivery, and result in costly late-stage remediations.

## The Solution is EASy

**EASy (Enhanced Application Security) is a comprehensive managed service from Cypress Data Defense that integrates seamlessly into your Software Development Lifecycle (SDLC), automating security processes while ensuring compliance.**

You'll get:

- Infrastructure as Code scanning, Code Scanning and Dynamic testing
- 3rd party vulnerabilities and License-Compliance
- Expert review to get rid of false positives

### KEY BENEFITS

- **Proactive Vulnerability Detection:** Identify and fix vulnerabilities early in the SDLC, remove false positives and inject vulnerabilities into your tracking system.
- **Compliance Assurance:** Simplifies reporting for standards like PCI-DSS, GDPR, HIPAA.
- **Expert Guidance:** Backed by seasoned application security professionals.

## Proactive Security for Your Software Development Lifecycle (SDLC)

Cypress Data Defense's EASy managed service integrates security seamlessly into every phase of your SDLC. Designed to support Agile and DevOps workflows, EASy ensures your applications are secure, compliant, and delivered without disruption.

“

Cypress Data Defense transformed our approach to application security. With EASy, we've seen a significant reduction in vulnerabilities at a very reasonable cost, without slowing down development.

- AppSec Team, Fortune 1000 company

# Protect your Business

## AN INNOVATIVE LEADER IN APPLICATION SECURITY ASSESSMENT SERVICES

Not all Managed Solutions Service Providers (MSSPs) are created equal. At Cypress Data Defense, we take a highly efficient, low-friction approach to securing applications early in the SDLC.

### Our other core services to help businesses secure their infrastructure:

#### Network Testing Services

Scan and audit for unpatched systems and misconfigured servers.

#### Cloud Security Testing

Security testing of your cloud infrastructure with our security experts.

#### Application Security Testing

Ad-hoc dynamic and source-code security testing of your applications.

#### Secure SDLC Consulting:

Consulting services to help embed security best practices into your workflows.

#### Mobile Application Assessment and Testing

Most mobile applications are vulnerable to a number of security threats. Not only can we test running applications, we can review the code to understand security vulnerabilities in the code.

#### Social Engineering (Phishing, Vishing, Smishing, Physical)

Social engineering is becoming a major threat that exploits your employees. We can help you test your practices and ensure that you are protected against such attacks.
